The Official Sega User Club Magazine

In this Issue:
KARATE
THE CASE
WARI
MORE FORTH NOTES
3D MAZE
and Much Much more!

All contributions welcome. Name, address and phone number must be included.

All software programs published by the magazine become the property of Sega Software Support unless by prior arrangement. They are accepted on the basis that they are the original work of the author. The programs must be submitted on tape or disc and a printed listing is desirable. Software is not returned unless accompanied by a stamped self addressed envelope.

For overseas contributions, please enclose a $1 note/coin of the country of origin if software is to be returned.

A plea for software listings — please check your software thoroughly for errors before sending it to us. Please update us on any errors you know about so that we can publish corrections.

We pay $NZ20.00 for the feature software program published each month and $NZ4.00 for all other full programs published.

Articles or reviews must be legible. Articles or reviews are paid $NZ4.00 per page on a prorata basis.

All contributions are subject to approval by the editor and may be edited to suit the magazine style. All payments are made after publication.

---

### SEGA USER CLUB
### MEMBERSHIP YEAR JULY — JUNE

Membership includes a subscription to the Club magazine SEGA COMPUTER as well as qualifying for other club benefits.

**NEW ZEALAND**
Membership Subscription: $37.00 plus GST   Total $40.09

Back copies available: $ 6.50 each
$35.00 complete 1985/86 year

If you join after the start of the subscription year you may request the back issues for that year.

**AUSTRALIA**
Membership Subscription: $NZ50.00 Airmail
$NZ46.00 Surface Mail

**ELSEWHERE**
Membership Subscriptions available on request.

# CONTENTS

# EDITORIAL

Well, here we are again for another issue of the Sega mag, and what an issue it is! I would like to thank all those people who sent in programs to me to be placed inside these illustrious covers! I hope that you all keep it up, just remember, each time you send in a program the magazine is that bit closer to being published, so keep them flowing.

One thing that you will find of interest is the way the market is changing, a few years ago you could sell any machine quite easily, today things are a lot more difficult mainly because people want their computers to do three things. (1) Teach them about computers, (2) Do work for them and (3) Play games, in that order! A while ago, games playing was at the top of the list.

By the way, Sega Software Support are now taking over the magazine and the software for Sega. They're great people and you'll hear a lot more from them.

So without further ado, any more waffle, no back chat, meaningless monologue, or dreadful dribble . . . on with the mag!

Michael Howard
PROGRAMMER & TECHNICAL SUPPORT

# LETTERS TO THE EDITOR

**DEAR EDITOR**

I have obtained a score of 999880 on Video Flipper and stopped to take a photo (enclosed) just to prove it. I don't receive your magazines but when a friend has finished with them, he gives them to me.
**Andre Stokes, Huntly**

Great stuff Andre! Unfortunately the photos were unreproduceable in the mag. You really should get the mag because it makes up an important library of Sega information. This gives us a good idea. . .for mag subscribers we will start, in the next issue, a SCOREBOARD of hi-scores for popular games. Send us your high scores and we'll publish the best! Note that the next issue is the start of the new subscription year so you'll need to act fast!

**DEAR EDITOR**

Do you have any programmers manuals for the Sega BASIC?
**Christopher Campbell, New Plymouth**
**C. E. Fenwick, Christchurch**

This is a question that crops up constantly. The new catalogue from Sega Software Support has BASIC GAMES PROGRAMMING and other books which give a lot of help. Other than these books, the SEGA BASIC is virtually identical to Microsoft BASIC which has become an industry standard for the IBM PC and other business computers. Your local Whitcoulls Technical Books or University Bookshop will have books on Microsoft BASIC which you would find very helpful. In fact, one of the strengths of the Sega is the close compatability in its BASIC to business computers.
We intend publishing a full manual for the SEGA BASIC within the next 6 months.

**DEAR EDITOR**

I am interested in the LODE RUNNER cartridge. Is it still available? Can we expect any new titles? As a matter of interest, how are cartridges constructed and what advantages do they have over programs on disk? I assume they are mostly comprised of ROM.
When attempting to SORT using Hucal, can you please clarify what should happen with Sorting Keys 2 and 3 (Manual p. 34). I deleted my totals, experimented and found the results rather confusing.
**R. J. Thorpe, Napier**

Firstly, Lode Runner is unavailable as is Exerion, Safari Hunter and others. The only cartridges currently available are in the catalogue of Sega Software Support. However, don't give up hope. . .changes are afoot.
Cartridges are constructed from ROM chips containing the games program and a small logic circuit to enable it to be read by the computer. Their advantages are that they are very easy to use, require no extra hardware, instantly load and, of course, have good copy protection. Their disadvantages have always been cost. If I had my way, I would have every good bit of software on cartridge but the cost would be exceptionally high.
Can anyone out there using Hucal give us some help on his last question?

**DEAR EDITOR**

I visited your offices when I was in Auckland and discussed how services to Sega owners could be improved.
I have talked to several Sega owners and it is clear there is a need for the following:
1. There is a criticism of the explanatory literature that goes with the computer and with the software. It does not provide sufficient data to understand what is happening.
2. There is a need to reinstate the series "Unexplained Sega Commands" in the mag.
3. What is happening to the magazine?
**Keith Hovell, Dunedin**

Dear Keith, I agree on all points. See my answer to one other letter here about Sega BASIC. We will reinstate the series about Unexplained Sega Commands.
As to the magazine, see elsewhere in the mag as to what is happening. Thanks for the letter. Much appreciated.

**DEAR EDITOR**

We have only had 4 issues so far of the magazine. What has happened?
**Mrs McDonald, Auckland**

Dear Mrs McDonald, due to some problems that arose late last year, the magazine was held up for 5 months. A double issue was released recently and now this issue is in your hands — the May/June issue. . .a little later than expected.
This is the last of the current subscription year. Sega Software Support will be handling both the Sega User Club and the magazine as well as software and hardware. Grandstand Computers will continue servicing all Sega equipment. Sega Software Support is immediately starting the production of the first magazine of the new subscription year (July/August) so that the magazines can be on time in future.
(P.S. Send in your subscriptions, programs and articles. . .NOW!!)

**DEAR EDITOR**

I am writing to complain that there are no outlets anywhere for Sega software or hardware. What has happened?
**R. Tennyson, Timaru**

That's right, few shops now stock Sega products. The only people who do are Sega Software Support. They operate a mail order service throughout NZ. Ask for their free catalog c/- P.O. Box 10-207, Auckland 4.

# IMPORTANT ANNOUNCEMENT

Bringing you up to date with the world of **SEGA.**

As some Sega Users have found out already, Grandstand Computers have now passed the responsibility for Sega support over to Glenys Millington at Sega Software Support. She will be responsible for all software and hardware purchases and for the **SEGA USER CLUB** and **Sega Computer**, the official User Club magazine. Mike Howard and all the Sega geniuses at Grandstand are still behind us and you can be assured that the Club and Magazine will continue at its usual high standard. However, we will make some improvements due to popular demand and these are shown over the page.

**SEGA SOFTWARE SUPPORT** is now responsible for all Sega enquiries apart from servicing equipment — these should still be made direct to Grandstand.

You can reach us at P.O. Box 10-207, Auckland 4, or Phone (09) 603-274 during business hours only.

This is the **last** magazine of the current Club subscription year and the next magazine (the July/August issue) is the start of a new Club subscription year. The new subscription costs are below. Unfortunately, GST has to be charged! Not our fault — blame Mr Douglas. To receive the next magazine we must have your Club subscription as soon as possible!! Get your chequebooks out now!! (and pens of course). As current subscribers know, the savings they make on our special software and hardware offerings more than make up for the Club subscription cost. The retail price of the magazine alone is $6.95.

**Sega Software Support** will supply you by mail order with masses of software and some hardware . . . all excellent value! You are strongly advised to **purchase before GST** as this will raise the cost to you by at least 10%. Also, some of our stocks are limited.

Subscriptions for the SEGA USER CLUB (which includes SEGA COMPUTER magazine) can be obtained by completing the Subscription Order Form. Note that the retail price of the magazine is $6.95 per issue.

**The annual club subscription is $37.00 plus GST.**

Subs received before August 31: $3.09 GST.

Subs received after August 31: $3.70 GST.

Note: This assumes GST is 10%. If the GST rate alters we reserve the right to amend these charges.

**Australian Subscribers**: Surface Mail $46.00   Airmail $50.00

FREE GIFT FOR SUBSCRIBERS — SEE OPPOSITE PAGE

Contributions from all you Sega users for **your** magazine are always gratefully accepted. Program listings etc., where possible please. Keep them rolling in!

Do you know of someone who has a Sega and isn't on our mailing list? Send us their name and address. They'll thank you for it.

Because we know our quality of service and support we offer we will give you our guarantee — your subscription will be refunded on a pro rata basis if you are not 100% satisfied with the Club.

Regards

*Glenys Millington*

Glenys Millington
Manager

**NEXT ISSUE     NEXT ISSUE     NEXT ISSUE**
Due out at the end of August
Copy deadline: in our hands by 12 August!!!

Some of the changes for the next issue are:

### 1.   A Buy/Sell Column

We are going to introduce a BUY/SELL Column for Hardware and user-written Software. Just send us:
* ★   Your name, address and phone number.
* ★   a few lines of advertising copy.
* ★   $4.00 per insertion. Cash or cheque must be enclosed.

We reserve the right to edit or reject any advertisement. We obviously cannot accept responsibility for goods or services purchased from these advertisements.

### 2.   An Australian column or page

We now have a number of contacts across the Tasman, many of whom get our magazine. Any Australian Sega user can just send us their material and we will take it from there.

### 3.   We now take Bankcard or Visa payments.

### 4.   An updated Local User Group list.

Many of the local user groups have fallen by the wayside over the past year due to changes of people and other vagaries. If you would like to be the User Group contact in your area, please send us your **name, area and phone number** and we will publish it for you. Others in your area can contact you and between yourselves arrange suitable times and places.

## July 1986 — June 1987 Sega User Club Subscription
## (includes Sega Computer Magazine)

**Please send me in my FREE GIFT of COMPUTERS DON'T BYTE** as I am not charging my sub. to a Credit Card and the date is before August 25.

Cash/Cheque/Visa/Bankcard (circle one)
Cheques payable to Sega Software Support, PO Box 10-207, Auckland 4, N.Z.

Credit Card Number:

Expiry Date:   /   /          Signed:

# Free Gift to Subscribers...

**COMPUTERS DON'T BYTE**

Yes — we are offering this Book if you subscribe to the SEGA USER CLUB Before 25th August 1986

COMPUTERS DON'T BYTE —
A gift for children and adults alike.

The computer revolution is here and affecting you and your children. After all, that's why you bought your Sega computer. This book delightfully and amusingly fills in the detail of the march of the revolution step by step. The history and development of computers and their languages, how computers are being used in education, business and society and where the future is going — it's all here in **Computers Don't Byte**.

Written simply and in plain language this book will appeal to new computer owners as well those advanced in computing skills.

Mary Matthew has been explaining computers for many years and the text is accompanied by delightful cartoons by Rita Parkinson.

This is a book for the whole family and is widely used in schools throughout the country. Now is your chance to get a copy for yourself — FREE.

# Some more FORTH notes... Michael Howard

My FORTH emulator program created a lot of interest from ardent readers. It's nice to see people realising that there is more to computers than just BASIC and games!

Firstly, here is a program written by Grant Emms. The program is written entirely in FORTH, and is called Lunar Lander. Remember, as with all FORTH programs, beware of spaces, and make sure you put them in the right places.

```
: LUNAR TITLE SET MAIN ;

: MAIN PRINT FUZ? SPEC HIEC LAND? MAIN ;

: SET 100 200 RAND 6 8 RAND 100 5 ;

: PRINT CR ,' Fuel : ' 2 PICK . CR ,' Height : ' 4 PICK . CR ,' Speed: '
  DUP . CR ,' Gravity: ' 3 PICK . ;

: FUZ? 2 PICK 0 <> IF INFUEL FLI? SUBF THEN ;

: INFUEL CR ,' Fuel to use? ' KEY 48 - ABS DUP DUP . 10 > IF INFUEL
  THEN DUP ;

: FLI? 4 PICK > IF DROP 2 PICK THEN ;

: SUBF 2 ROLLER DUP 6 ROLL ROT - SWAP 1 ROLLER ;

: SPEC 2* - 3 PICK + ;

: ROLLER 0 DO 5 ROLL SWAP LOOP ;

: HIEC 4 ROLL 2 PICK - 0 3 ROLLER DROP ;

: LAND? 4 PICK 1 < IF LANDING THEN ;

: LANDING DUP 5 < IF CR ,' We have Touchdown! ' THEN CRASH? ;

: TITLE 12 EMIT CR ,' <<Lunar Lander>> ' CR ;

: CRASH? DUP 5 > IF CR ,' We have a bit of a crater! ' THEN ABORT ;
```

I haven't had time to test this program out, but Grant tells me it works! To run the program just type in LUNAR, when you have finished typing in the program.

Other interesting remarks that Grant came up with include a way of speeding up the program. In FORTH you are forever PUSH'ing and POP'ing, so Grant sped up this bit by using Machine Code, here is that code:

```
10 E=0
20 X=&HF000 :RESTORE 50
30 READ A$:IF A$="END" THEN 60
40 POKE X,VAL("&H"+A$):X+X+1 :GOTO 30
50 DATA ED,5B,64,81,13,13,21,00,FA,01,08,00,ED,B0,11,00,FA,01,38,00,ED,B0,C9,END
60 X=&HF100 :RESTORE 90
70 READ A$:IF A$="END" THEN 250
80 POKE X,VAL("&H"+A$):X=X+1 :GOTO 70
90 DATA 11,A7,FA,21,9F,FA,06,14,C5,00,00,01,08,00,ED,B8,C1,10,F5,54,5D,2A,64,
   81,23,23,13,01,08,00,ED,B0,C9,END
```

And alter lines 365 and 370 to:

```
365 FOR Q=1 TO 4 :CALL &HF000 :A(Q)=E :NEXT :FOR Q=4 TO 1 STEP -1 :E=A(Q):CALL
&HF000 :NEXT
370 FOR Q=1 TO 4 :PRINT TAB(8) ;Q;".."A(Q) :NEXT :GOTO 410
```

Apparently a bug got into the program, line 1220 should also check for e$="<> " as well....SORRY! Insert OR e$ "<> " into the line.

Well that wraps up this bit on FORTH, I hope that people send in more modifications to me and we'll end up with a really great program. Don't forget that I will be more than happy to receive your FORTH programs.

# *WARI* by Norman A. Raynel

This is an old African native game that has been played for hundreds of years. You can play against the computer or against a friend. There are 12 piles of stones (6 are yours and 6 are your opponents). Each pile has 4 stones at the start but this will vary as the game progresses. The object of the game is to select a pile of stones, pick them up and then one at a time drop them off around the other piles of stones in an anticlockwise direction. The computer will do this for you, all you have to do is select which pile of stones. If your last stone dropped on your opponents side and it makes a total of 2 or 3 in that pile then you capture all those stones and these will be transferred to your score. In addition, if the next pile of any consecutive pile in a clockwise direction has 2 or 3 stones in them then you will also capture those stones and they will be transferred to your score. The first player to gain 24 stones is the winner. If during the course of the game one player has no stones left then his opponent has to select a move that will give at least one stone.

Sounds complicated? It's not really, once you get used to it.

```
5 SCREEN 1,1:CLS
10 PRINT "  WARI   by Norman Raynel"
20 PRINT:PRINT :PRINT
30 PRINT"Welcome to the game of WARI."

# How to get HuCal to work with a Printer

Some people, those lucky to have HuCal, an SF-7000 and a Centronics printer have been having problems with the machine not printing out data properly. So here is a little program, that when run will alter your disc so that it will work with a printer.

To use it, just enter the program, run it, place your offending disc in the drive and follow the instructions.

I'd like to thank Mr Harold Webber for sending the program to me.

If anyone knows how to get SegaBase working with a printer then please send a copy of the program to us.

# SpaceFighter by Richard Turner

In this game you are in charge of a space ship and you must destroy the red beasties on planet surface. To run use the joystick and fire to fire.

The game is actually quite addictive, and gives some insight into how you can write a good game.

```

# DRAW!! . . . a program dissection

This is the second of our drawing programs, and is the subject of the program dissection.
The program allows you to move a shape about the screen by use of the cursor keys or joystick. Pretty simple.
Okay, now to the dissection.

Line 10    This tells the computer to use the Graphics Screen, i.e. the one used for drawing lines on. If you use SCREEN 1, 1 you would tell the computer to use the text screen, you know, the one in green and black when you turn your computer on. CLS tells the computer to clear the screen, so that if anything is written on the screen, it just disappears. The instruction COLOR is a little more complex. This lets you alter the PAPER colour, the PEN colour, and the BORDER colour. The format of the instruction is PEN, PAPER, BORDER. So the command COLOR 1, 2, 3 would set the pen colour to colour 1, paper 2 and border to colour 3. When you write, you'll write in Black on a Green background and the border will change to light green. See pp 97-100

Line 20    Make the computer print at location 80 dots across, and 90 dots down on the Graphics Screen. The message to print is "DRAW!!" The CHR$(17) makes the computer print out the text in Double Width, so DRAW . . becomes D R A W.

Line 30    Is a small delay. The variable L counts from 1 to 500.

Line 40    CHR$(16) is the opposite to CHR$(17) so any more text will be printed in single width and not double width.

Line 50    a REM means REMark, it has no effect on the computer program at all, it is used to keep a note for the programmer or user of the program.

Line 60    This clears the screen.

Line 70    This changes the pen colour to colour 1, (Black) and the border to = '(dark red).

Line 80    This is a little complex. Firstly the computer jumps to line 310. It continues execution from there until it reaches a RETURN instruction. When the RETURN is executed, the computer jumps back to the command AFTER the GOSUB. In this case it is line 90.

Line 90    Place the next lot of data on the screen at location X (places in) and Y (places down) the screen. The PRINT tells the computer to put a ")" on the screen at position X and Y on the screen. You can put any character between the quotes

Line 100   The computer now reads the keyboard, whatever key is being pressed is put into the variable A$. So if you are pressing "Z" then the variable A$ will hold the letter Z.

Line 110   This is the same as saying "if the user is pressing the LEFT arrow then move the cursor left". Don't forget that the position of the cursor is determined by the variable X and Y. So if we alter one of these variables the position of the cursor will also alter. The left arrow is the same as CHR$(29). See page 19 of the handbook.

Line 120   As above but move right.

Line 130   As above but move cursor up.

Line 140   As above but move cursor down.

Line 150   Check the status of the joystick. This data is put into the variable PL. By status I mean if the joystick has been moved or not.

Line 160   This is the same as line 130. but the difference is that the cursor moves up if the joystick is being pushed up.

Line 170   As above but move right.

Line 180   As above but move down.

Line 190   As above but move left.

Line 200   If the joystick fire button is being pressed then clear the Screen. See page 149 (Basic Level III Manual).

Line 210   Back to A$. If you are pressing C then clear the screen.

Line 220   If you are pressing "E" then end the program.

Line 230    If X is less then 0, (eg -1 etc) then you will get an error. This is because the cursor cannot be put on the screen at position -1. So this line checks for X being less than 0, if it is X is made equal to 0. Thus preventing an error occurring.

Line 240    If the cursor is about to fall off the right hand side of the screen, then X is brought back so that it doesn't.

Line 250    Same as 230. but make sure the cursor doesn't go off the top of the screen.

Line 260    Same as 240 but make sure the cursor doesn't go off the bottom of the screen.

Line 280    Go back to line 90.

Line 290    Print a space.

Line 300    Print another space.

Line 310    Print "-----------" on the screen.

Line 330    Print 205 spaces then print "Use arrows . . . ."

Line 350    Print "Use . . ." etc on the screen.

Line 360    A delay, T counts from 1 to 1500.

Line 370    Set the screen ot the text screen and clear it. Set the colours of the text screen to white on magenta. Note that the format for the COLOR statement is different for the two screens.

Line 380    Clear the screen and return to the line after the GOSUB statement (line 90).

If you wish to learn more about programming then I suggest that you get hold of a copy of "Teach Yourself BASIC Games Programming" as this will help you a lot. This is available from Sega Software Support.

# Turtle

It's funny how so many people have written to me wanting a simple drawing package, just for designing small title screens, and the like. Well in this issue we have included two! This one is a drawing package, that is quite simple, but very good, and to make things even easier, the instructions are in the program.

# 3D Maze by S. Coupe

At last a 3D maze program is available. The program sets you in a "Rat's Eye View" of a complex maze. The object is to find gold and treasure and to murder various nasties. In other words, good wholesome fun!

To move about the maze, use the arrow cursor keys.
